

Adventure: Tesma – Dr. Nyquists Geheimnis

Summary:

Dr. Nyquist is the owner of Halotec Industries (specialized on cameras, light and printers), which he has quickly made very successful among the elite using mind control to enslave lab workers. Now he plans to conquer the city and invites everyone to a ball, where he has a big surprise in store for them at 10 PM. This is actually the introduction of a gas, which enables mind control, into the ballroom. In order to program the minds of the guests he unveils a strange device looking like a bulky TV. While he claims it is a new invention for showing videos, the hypnotizing patterns on the screen start to control the crowd.

The heroes are there as agents to investigate Dr. Nyquist's remarkably rapid rise, discover the extend of his plan and try to stop him

Opponent's Plan:

From 7:30 PM: Arrival of guests

8 PM: Welcome speech, hint of surprise at 10 PM. Large concealed "something" on stage. If players investigate: strangely complicated device with big screen

10 PM: Surprise / Submission

Device gets uncovered: mind controll device (works together with mind controll gas that is spread in ball room) that works with hypnotization, disguised as a newly invented electron tube screen.

Important Items/Information:

Study: Perfect Documents, Hidden Staircase

Laboratory: Protocols, Antidotes, "Cojitavi Empire"

Cells: Captured Beggars

Secret Study: Evidence of Nyquists doings,

Newspaper Collection → Missing Beggars ← This section is underlined

Syringe with control serum:

- Effect: 1 points of control

- Level: 3

- Decay: -0.25

Antidode:

- Effect: -1 Level of Control

- Level: 1

- Decay: -0.25

Opponents/Obstacles:

- Servants (Level 3)

- Guards (Level 3, Strengths: Fighting, Athletics)

- Mind controlled Lab workers (Level 3, Strengths: Chemistry, Medicine)

- Dr. Nyquist (Level 4)

General vibe and ambiente:

Society

Tesma is a Steampunk city with victorian vibe and a society that is exhilarated with new inventions. Saftey is considered only in hindsight and while there is a lot of steam operated devices, electricity is also a huge part. There are autonomous robots called automatons. Some people treat them like humans some don't. Philosophers struggle with the question if they have their own mind.

The ballroom

People dance, chat and interact with the exhibition of Halotec devices. The light is electrical but the brightness varies slowly and is more on the dim side. There are automatons throughout the crowd, the orchestra consists only of automatons.

The presented inventions are:

- Ichtyographic camera: A fish with big eyes swims in a small glass container. There are wires connected to its head leading to a huge complicated looking device that engraves discs
- Printer: The discs of the camera are inserted and a lot of mechanic pens draw the picture onto paper
- Voice recorder: Looks like a grammophon
- Bright flashlight: Huge clunky device producing clear white light (the usual lightning of the room is a more yellow dim tone)
- X-Ray picture: People stand in front of a paper screen. The huge device turns on its radiation and funny looking pictures of the skeletons of the people are produced.
